Streamlining IT Procurement

Automating Standard Laptop Orders with Flow Designer

Phase 1 – Requirement Analysis & Process Planning

Individual Phase Technical Documentation

Project: IT Procurement Automation: Standard Laptop Fulfillment via Flow Designer

Platform: ServiceNow – Flow Designer, Service Catalog, Process Engine

Phase Focus: Define the business requirement, process scope, roles, records, and acceptance criteria before building the automation.

1. Phase Overview

This phase is derived from the uploaded project documentation and expands the original phase activities with additional implementation and validation notes. The original document defines the ServiceNow lifecycle as Request (REQ) → Requested Item (RITM) → Catalog Task (SCTASK).

2. Detailed Implementation Steps

Step 1: Identify the Standard Laptop procurement requirement and expected automated outcome.

Step 2: Identify requester, approving manager, ServiceNow administrator/automation developer, Hardware team, and QA tester.

Step 3: Define REQ, RITM, approval record, and SCTASK records.

Step 4: Document Service Catalog → REQ/RITM → approval → Flow Designer → SCTASK → Hardware fulfillment.

Step 5: Define required SCTASK values: Short Description, Description, Assignment Group, Approval, and State.

Step 6: Prepare acceptance criteria for every phase.

3. Additional Phase Notes

- Create a simple process map before configuration.
- Use the Flow name “Standard laptop task” and catalog item “Standard Laptop”.
- Define traceability between REQ, RITM, and SCTASK.
- Document possible failures: missing task, blank assignment, ACL violation, duplicate task.

4. Configuration / Validation Table

Planning Item	Expected Definition
Catalog Item	Standard Laptop
Flow	Standard laptop task
Parent Record	Request (REQ)
Line Item	Requested Item (RITM)
Fulfillment Record	Catalog Task (SCTASK)
Assignment Group	Hardware

Planning Item	Expected Definition
Approval Gate	Managerial approval

5. Phase Completion Criteria

- All implementation steps completed in the appropriate ServiceNow environment.
- Configuration/validation values match the expected output for this phase.
- Evidence or remarks are recorded for handover to the next phase.

6. Documentation Record

Phase Status: _____ Tested By: _____ Date: _____
