Streamlining IT Procurement

Automating Standard Laptop Orders with Flow Designer

Phase 7 – Automated Task Generation, Routing & QA Verification

Individual Phase Technical Documentation

Project: IT Procurement Automation: Standard Laptop Fulfillment via Flow Designer

Platform: ServiceNow – Flow Designer, Service Catalog, Process Engine

Phase Focus: Verify that approval produces the correct SCTASK under the RITM and routes it to Hardware.

1. Phase Overview

This phase is derived from the uploaded project documentation and expands the original phase activities with additional implementation and validation notes. The original document defines the ServiceNow lifecycle as Request (REQ) → Requested Item (RITM) → Catalog Task (SCTASK).

2. Detailed Implementation Steps

Step 1: Open the Request and Requested Items.

Step 2: Open the Standard Laptop RITM.

Step 3: Verify RITM stage is Fulfillment or Work in Progress, as configured.

Step 4: Open Catalog Tasks.

Step 5: Confirm a new SCTASK was automatically created.

Step 6: Open the SCTASK.

Step 7: Verify Short Description exactly reads “Laptop need to Configured”.

Step 8: Verify Description contains configuration instruction.

Step 9: Verify Assignment Group is Hardware.

Step 10: Verify Approval is Approved.

Step 11: Verify State is Open/Pending or the configured ready-for-staging state.

Step 12: Record each QA checkpoint.

3. Additional Phase Notes

- Confirm SCTASK is linked to the correct RITM and REQ.
- Check that no unintended second SCTASK exists.
- Confirm Hardware can access the task.
- Retain execution details and test evidence.

4. Configuration / Validation Table

QA Checkpoint	Expected Output
Flow Trigger	Service Catalog submission activates flow
Approval Gate	Requested → Approved
Task Instantiation	SCTASK auto-generated under RITM
Short Description	Laptop need to Configured
Assignment Group	Hardware
Approval	Approved
Task State	Open/Pending / ready for configuration

5. Phase Completion Criteria

- All implementation steps completed in the appropriate ServiceNow environment.
- Configuration/validation values match the expected output for this phase.
- Evidence or remarks are recorded for handover to the next phase.

6. Documentation Record
