Streamlining IT Procurement

Automating Standard Laptop Orders with Flow Designer

Phase 8 – Testing, Troubleshooting, Governance & Sign-Off

Individual Phase Technical Documentation

Project: IT Procurement Automation: Standard Laptop Fulfillment via Flow Designer

Platform: ServiceNow – Flow Designer, Service Catalog, Process Engine

Phase Focus: Complete end-to-end testing, troubleshoot common failures, apply deployment governance, and document project completion.

1. Phase Overview

This phase is derived from the uploaded project documentation and expands the original phase activities with additional implementation and validation notes. The original document defines the ServiceNow lifecycle as Request (REQ) → Requested Item (RITM) → Catalog Task (SCTASK).

2. Detailed Implementation Steps

Step 1: Perform an end-to-end test from Service Catalog submission through SCTASK generation.

Step 2: Test the approval path and verify fulfillment follows approval.

Step 3: Verify Flow status is Active.

Step 4: If no SCTASK is generated, check Flow status and Standard Laptop Process Engine binding.

Step 5: If Assignment Group is blank, verify Hardware is active and correctly selected.

Step 6: If ACL/security error occurs, verify Run As is System User.

Step 7: If duplicate tasks appear, check Flow Designer, legacy Workflow, Execution Plan, or Business Rule automation.

Step 8: Review Flow Execution Details for duration and errors.

Step 9: Maintain DEV configuration in an Update Set.

Step 10: Promote to TEST/UAT before Production according to change control.

Step 11: Maintain a hardware checklist for Asset Tag scanning, OS Imaging, BitLocker verification, and delivery receipt capture.

Step 12: Complete sign-off after all acceptance criteria pass.

3. Additional Phase Notes

- Keep a troubleshooting log: symptom, cause, action, result.
- Use controlled deployment rather than direct production edits.
- Consider dynamic lookup/data-pill routing for future scalability.
- Assign a support owner for post-deployment monitoring.
- Archive final configuration and test evidence.

4. Configuration / Validation Table

Issue	Likely Cause	Resolution
No SCTASK after approval	Flow inactive or legacy routing	Check Active status and Process Engine binding
Assignment Group blank	Hardware group inactive/reference changed	Verify group and reselect Hardware
ACL/Security error	Run As not System User	Set Run As to System User and reactivate
Duplicate tasks	Multiple automations active	Review Workflow, Execution Plan, Business Rules, and Flow
Execution failure	Flow/action configuration issue	Review Flow Execution Details and correct configuration

5. Phase Completion Criteria

- All implementation steps completed in the appropriate ServiceNow environment.
- Configuration/validation values match the expected output for this phase.
- Evidence or remarks are recorded for handover to the next phase.

6. Documentation Record

Phase Status: _____ Tested By: _____ Date: _____
